SUMMARY

A resourceful, enthusiastic and challenge seeking individual with 7.5 years of experience in various SAP technologies with primary skill as ABAP on HANA and utilizing secondary skills CDS, OData, Fiori/Ui5, BTP, RAP for Complex innovative implementations in development, support and maintenance projects enhancing both the business quality as well as my career advancement.

SKILLS

- SAP ABAP on Cloud, RAP, CDS, SAP Fiori/Ui5, OData, BAS, BTP, CAPM, MVC, RICEF
- SAP MM, SD, TM, FI, PLM
- BAPI, RFC, ALE, IDOC, LSMW, Batch, LTMC, BRF+, BADI, OOABAP
- Agile Methodology, Python, JavaScript, XML, JSON, ABAP 7.5+ syntax, S4 HANA, Clean Core, SAP Build, Eclipse ADT, SAP GUI

EMPLOYMENT HISTORY

- Worked as Technical Consultant at Wipro Ltd from June 2024 to Now.
- Worked as Packaged App Development Senior Analyst at Accenture PLC from May 2022 to May 2024.
- Worked as Technology Analyst in Infosys Ltd from Jan 2022 to May 2022.
- Worked as Senior Systems Engineer in Infosys Ltd from Nov 2020 to Dec 2021.
- Worked as Systems Engineer in Infosys Ltd from Oct 2018 to Oct 2020.

EXPERIENCE

WIPRO LTD., Client – *APPLE Inc.*

Project Description – Apple Inc. is an American multinational technology company, known for its consumer electronics, software and online services. Apple's product lineup includes portable and home hardware; and various software and services. They needed a Digital Transformation and Migration from their existing legacy SAP ECC to the latest S/4 HANA landscape for leveraging the capabilities for a more robust and efficient supply chain, resources and planning.

November 2024 – Present

- Code Remediation on RICEF objects for S/4 HANA Migration, ATC fixes, Code Vulnerability fixes. Proactively identified potential failures and provided fixes for the

same (sy-dbcoun logic failure, BDC failure for VL02N serialization SNOTE – 3661899 etc).

- Performance tuning and analysis with fixes using code pushdown techniques and parallel cursor methods for improved overall performance in few instances up to 95% lower processing time and resource utilization.
- POC on RAP application utilizing BTP cloud connectors and external API call using destination service calling in ADT and also utilizing service consumption model.
- Developed feature addition Mass create and update BOM programs utilizing SPTA framework and in some cases using standard parallel processing using NEW TASK and manually handling thread utilization using parallel generators for increased performance.
- Functionality implementations for Custom free style Ui5 application using BAS and git for version control. Debugging using chrome console for bug analysis.
- Providing peer review lowering cases of rework and retest confirmation, resulting in effective sprint cycles delivering targets with minimal bottle necks.
- Go-Live cutover activities, post go-live warranty support, tickets handling, bug fixes and support.
- Mentoring junior developers with the ways of workings and KT sessions for smooth delegation of work all while coordinating with leads and onsite team.
- Working at client location in a client facing role, building rapport and increased collaboration with cross functional and multi-cultural teams while adhering to agile methodologies.

WIPRO LTD., Client – *SIPCHEM*

Project Description – Sahara International Petrochemical Company, is a Saudi Arabian petrochemical manufacturer. It produces and markets a variety of products, including methanol, polymers, and other chemicals, serving industries like construction, automotive, and pharmaceuticals. It also has a trading and marketing subsidiary SIPCHEM EUROPE SA. They needed a Digital Transformation in their SAP landscape utilizing RISE with SAP, incorporating SAP's clean core principles.

June 2024 – November 2024

- Created Odata service for journal entry reversal using BAPI_ACC_DOCUMENT_REV_POST which gets triggered when request from service now is pushed to SAP system and the odata service should provide a confirmation response post successful completion.
- Worked on existing Vendor Balance Confirmation report for Internal form & Auditor Form. On the basis of the user type one of these need to be generated and sent as an email using the existing utility classes.
- Created Odata service used for Asset creation using BAPI_FIXEDASSET_CREATE1 when a request is raised in service now.
- Worked on creation of Custom Loan, precious Lease reports programs for complex business needs.

-
- Developed adobe form of Delivery note with details of shipping related details and conditions, material classification, weight and volume along with section for acknowledgement of receipt of goods confirmation signature list. Added the report as an output type that gets triggered during PGI.
 - Provided support working with cross functional teams during the integration testing. Debugging issues of P2, P3 and providing quick fixes, solutions and workarounds during warranty phase.
 - Documentation of the technical objects along with business requirements and provided peer code review.

Accenture PLC, Client – *Telia Company*

Project Description – Telia Company is a leading Telecommunications Company across the Nordics and Baltic region. It has businesses and services in Networking, Media, Device Sales and Insurance etc. For diversifying and scaling up their horizontal offerings, business was looking for enhancing their existing process with feature addition and newer requirements.

December 2022 – May 2024

- Coordinating with client for requirements and proposing future proof technical solutions which will align with their future requirements leading to less code changes and saving budget.
- Expanded my CDS, OData and BTP Fiori skillset working on requirements and proposing solutions.
- Documentation of Technical Specs and Design documents.
- Proposed technical Solution and Developed custom program and apps for (few but not limited to):
 - Enhancing standard process of BR creation for custom item splitting and output determination.
 - Utilized Custom Fields and Logic App Key user extensibility for addition of custom field which is needed only to be shown to the back-office users along with custom validation and logic for updating other field data based on the value in the custom field.
 - Mass Cancellation of Billing documents using BAPI where it uses CDS to determine relevant documents to create background jobs, utilizing SPTA framework for performance and exposing the program as a Transactional Fiori Application.
 - Enhancing custom push & pull order UI5 application for feature addition.
 - Updating Sales Document Flow to show customer required complex additional documents for client specific processes for better process trackability.
 - Automatic Reversal process and invoice cancellation based on user actions in standard programs as per requirement.

- Automating complex client specific Delivery process (PGI, User status change, BR creation, Sales Document Flow update) by implementing several enhancements of standard programs.
- Creation of custom format business reports which need to be downloaded as excel using xml transformations and enhancing existing transformations as per requirement.
- Addition of custom validation and custom messages in contract t-codes and LTMC process to be shown during Validation and simulation for smoother process of data migration.
- Automatic generation of Tax Report utilizing CDS views as per business requirement.
- Batch job for Handling and transfer of xml files between AL11 paths based on file name string.
- Bug fixing, Debug for analysis and providing technical solutions to the functional team as workaround for defects.
- Coordinating with new joiners for easier onboarding into the project and system environment.

Accenture PLC, Client – *L’Oreal*

Project Description – L’Oreal has its line of Personal Care and Cosmetic products which it produces and supply under their brand. The business and product data are managed using their custom SAP Fiori /HANA Applications which need to be developed and enhanced as and when requirements arise.

June 2022 – November 2022

- Designed and implemented CDS views using Associations, joins, Parameters.
- Developed and Enhanced OData service methods as per requirement.
- Implemented custom validations and custom error handling messages to be shown in Manage Product Master Fiori App.
- Dev of custom report and exposing it as a transactional Fiori App.
- Coordinating with client users and business and proposing technical solution for requirements.

Infosys Ltd., Client - *Unilever PLC*

Project Description - Unilever has products in 3 main areas i.e. Foods & Refreshments (beverages and ice cream), Home Care, and Beauty & Personal Care. Whose R&D data is managed using their customized SAP PLM Fiori apps for recipe, specification and BOMs.

December 2020 – May 2023

- Expanded my SAP RICEF skill set as part of Specification and Recipe Management in the field of PLM for process industries.
- Worked on the custom programs and Issue solving in BOM generation and recipe management.

-
- Replicating the defects in the lower system and documenting Detailed Analysis.
 - Resolved priority tickets of P2, P3 & P4 without any SLA breach in SNOW with Workaround / solution in the areas of -
 - Specification/ Recipe Creation issues
 - Object sets & Search app UI / Functionality
 - Custom Process Flow Diagram Tool
 - Custom Reporting issues
 - BOM Creation & BOM IDOC Transfer
 - Interface monitoring using Postman tool
 - Creation of custom tables as per client requirements.
 - Coordinated with geographically diverse groups of PLM R&D owners and supply chain as part of Material Life cycle Management team running Data cleansing process for each quarter for removing the unutilized non stock materials, their specifications, recipes and linked BOMs.

Infosys Ltd., Client - *Bombardier Aviation*

Project Description - Bombardier Aviation is a commercial aircraft manufacturing subsidiary of Bombardier Inc. During its partnership with AIRBUS for a new CSeries program, they needed their PLM platform with custom enhancements and later with their acquisition of TRIUMPH's wing program they needed to extend their existing PLM platform to the new wing manufacturing division.

October 2018 - November 2020

- Worked on various Workbench objects.
- Creation of DDIC objects and maintaining TVARVC entries used in custom programs.
- Solution Design from requirements gathered and documenting SD & DD.
- Debugging complex scenarios by understanding functional processes for implementing implicit & explicit BADI enhancements in custom and standard programs.
- Designing custom report programs (Classic, ALV, Interactive) for business reports.
- Developing custom layouts using SAP script and smart form.
- Creation and usage of OOPS for custom class to authorization check using auth objects for segregation of data & t-codes as per business requirement.
- Creation of custom programs to extend material to plants using BAPI.
- Automating creation of test data using eCATT or SAP script recorder.
- Creating use case documents and performing Unit and integration testing in lower systems.

HIGEST EDUCATIONAL QUALIFICATION

Manipal Institute of Technology, Manipal – *Bachelor of Technology*

LANGUAGES

Telugu, English, Hindi
